For Immediate Release

“Connecticut Water investing \$500,000 to replace 1940’s era water main on West Street in Windsor Locks”

CLINTON, CONNECTICUT, July 20, 2017 – The Connecticut Water Company (Connecticut Water) today announced that an estimated \$500,000 water main replacement project will begin on West Street in Windsor Locks the week of July 31st. Approximately 2,400 feet, or nearly one-half mile, of water main that was installed in the 1940’s will be replaced as part of the project.

“This project will improve water system reliability and enhance water quality,” stated Craig J. Patla, Connecticut Water’s vice president - service delivery. Mr. Patla added that the project is being done through the company’s WICA (Water Infrastructure and Conservation Adjustment) program. Through WICA, the company may charge customers a small surcharge on their bills for projects to invest in replacing aging water mains or for conservation related projects.

Since the inception of the WICA program in 2007, Connecticut Water has invested more than \$122 million and replaced more than 106 miles of water main with an average age of 76 years. Connecticut Water owns 1,600 miles of water main across the state.

The project on West Street in Windsor Locks includes the area between the North Street and Spring Street. Beginning July 31st, work hours will be 7:00 a.m. to 4:00 p.m. The project is expected to be completed this fall.
