For Immediate Release

Connecticut Water investing nearly \$500,000 to replace 2,600 feet of aging water main in Enfield

ENFIELD, Conn. — April 19, 2018 — Connecticut Water announced that it will be replacing 2,600 feet, or nearly one-half mile, of aging water main in Enfield. The main was installed more than 50 years ago. Water main on the following streets will be replaced as part of the project:

- Cross Street
- Oak Avenue
- Spring Street

Work began last week on the southern end of Spring Street. The project is expected to be completed by the end of May.

“This project will improve reliability of water service, enhance water quality and supply more water to hydrants along the road,” stated Craig J. Patla, Connecticut Water’s vice president, service delivery. Patla added that the project is being done through the company’s Water Infrastructure and Conservation Adjustment (WICA) program. Through WICA, the company may charge customers a small surcharge on their bills for projects to invest in replacing aging water mains or for conservation-related projects.

Since the inception of the WICA program in 2007, Connecticut Water has invested more than \$139 million and replaced more than 118 miles of water main with an average age of 76 years. Connecticut Water owns 1,600 miles of water main across the state.

Work hours will be from 7 a.m. to 4:30 p.m., Monday through Friday. Customers will be contacted directly by Connecticut Water with additional information on the project, and advance notice will be given before any planned service interruptions related to the water main replacement.
