Annual Water Quality Reports Available From Connecticut Water

CLINTON, Conn. — Aug. 26, 2019 — Connecticut Water’s latest water quality reports are available to customers and others who consume the water produced by the company’s more than 60 water systems across the state. The reports summarize the results of water quality testing done in 2018 and include information about the company’s water systems and source-protection measures. Connecticut Water works closely with the Connecticut Department of Public Health to ensure that the water it provides to customers meets or is better than state and federal standards for drinking water.

“Connecticut Water employees are committed to delivering customers ... clean, high-quality drinking water. We know water is one of life’s essentials and touches everything we care about,” said Craig J. Patla, Connecticut Water’s vice president, service delivery. “We encourage our customers to read the report for their water system so they can see the extensive water quality testing and monitoring that is performed throughout the year and can have confidence in the quality of the water provided to them.”

The company’s annual water quality reports summarizes the results of 170,000 water quality tests conducted in 2018. More than 400 tests are performed each day for more than 120 potential contaminants and parameters that could affect the quality of tap water. Connecticut Water collects and tests water samples before and during the treatment process and in the distribution system before it reaches a customer’s home. Samples are tested at laboratories certified by the DPH and the results are submitted to the DPH’s Drinking Water Division.

Connecticut Water is taking full advantage of internet capabilities to reduce the costs and environmental impacts of printing and mailing the annual water quality reports to customers. All customers may view and download the water quality reports at the company’s website, <http://www.ctwater.com/waterquality>. Customers without online access can obtain a free copy of the water quality report for their system by calling 800-286-5700 between 8 a.m. and 4:30 p.m. Monday through Friday, except holidays.
